

Prowise OTA update policy

Prowise touchscreens* are serviced with regular, automatic OTA (Over-the-air) updates which enhance both the device and the software on the device. These updates can, but will not always contain:

- Updates of applications or the operating system,
- Security updates,
- Firmware updates for the device

As soon as an OTA update is available for your device, you will receive a notification if automatic updates are enabled. We strongly advise you to always install our latest software and application updates to make sure all of the latest functions and security updates are available and you can use the device optimally.

However, advancements in hardware and technology eventually lead to outdated devices; and as time goes by, we cannot indefinitely guarantee that older devices will be updated to leverage new OS features or that older screens will continue to support device setup or the ability to receive content from Prowise.

It is possible a certain update will not become available for your touchscreen. This could be the case if the hardware specifications are insufficient to support the new software update (eg. not enough RAM- or ROM) or because the performance of the touchscreen would decrease considerably because of the update (eg. if the processor is not fast enough). However, we do make an effort to supply as many types of touchscreens as possible with our OTA updates.

This document provides notice of the OTA Update policy in advance for:

- Prowise touchscreens* —Applicable to touchscreens for education and business customers.

General policy

- Once a device reaches its Auto Update Expiration (AUE) date, it means that the product model is considered obsolete and automatic software updates from Prowise are no longer guaranteed.
- Customers using devices that have exceeded the AUE date will no longer receive full support for OTA updates from Prowise.
- In this document, Prowise will provide notice of a model's AUE Date.
- New software updates may be received later than the AUE date published, but will never be stopped sooner than listed.
 - For Prowise touchscreens this will be 5 years after launch of the hardware.
- The "End of Sale" date of the device has no relation to the model's AUE date. Therefore, the End of Sale date will not be displayed in the table.
- While we do our utmost best to enable updates as soon as possible to all applicable models, delivery time of these updates may vary depending on the regions and models.

*Prowise touchscreens to which this update policy is relevant.
